

Cost Savings Analysis

A COMPREHENSIVE SAVINGS
STRATEGY

Asset Solutions, LLC

*SAVING ENERGY IS
GOOD BUSINESS!!!*

Time – Value - Money

What is a cost savings analysis?

A cost savings analysis is an in-depth analysis performed by qualified individuals skilled in real estate operations, engineering, energy and construction as well as taxation for the purpose of identifying the Individual building operating expenses, their associated costs, and appropriate savings and improvements.

We conduct energy audits and surveys. These audits provide real estate owners and associations with an in depth report on systems, components, return of investment and savings percentage that has less than a 3 year payback for immediate implementation. We also provide increase energy efficiency and savings with Virtualization and server consolidation reducing energy use up to 80%.

Quality Assurance Guarantee

If you challenge the savings claimed, even several years after the study, our team stands behind our conclusions and will provide our services at no additional cost should any meeting or testimony is required.

Myth: A Cost Savings analysis is expensive and a waste of time.

Fact: Our cost savings approach is considered a conservative methodology and may not cost anything unless we find savings. The study can be based 100% on contingency so there is no risk to our clients.

Operations Engineering Approach

Our management, engineering, construction, and accounting approach combined with our 30 years of experience makes us very unique in the industry.

Our Team

Asset Solutions team of experts are from the ranks of some of the biggest real estate/accounting Companies in the area.
